DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 3-5 and 16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, "preferably" is vague. The use of "larger" and "high" without a standard is indefinite. It is not clear what "optimal" defines.

Claims 4 and 5 are written as a method of manufacture/design in the selection of the number of nozzles. Correction is required.

In claim 16, the use of "preferably" is vague.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 7-10, 12, and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Conner (5148776).

Conner shows a nozzle/valve element 13 that delivers water based on load (figure 7) as determined by a controller 10.

In regard to claim 2, a plurality of nozzles may be used (col.6, lines 3+).

Claim 3 is so broad as to read on any system.

In claim 7, the frame reads on the intake manifold.

In regard to claims 12 and 13, there is a pump 17 with a regulator 18.

Art Unit: 3747

Claims 1-3 and 8-16 are rejected under 35 U.S.C. 102(b) as being anticipated by O'Neill et al (4960080). Figure 1 shows two nozzles 60, 62 for spraying water into an engine wherein the system is controlled by engine load (col.2, lines 25+).

In regard to claims 8 and 9, see regulator 32.

In regard to claims 10-12, there is an electric pump 10 providing constant flow communicating with a relief valve 18 (col.4, lines 15+).

In regard to claims 13 and 16, alcohol in the water mixture reads on cleaning and a second pressure medium (col.3, lines 67+).

In regard to claim 14, see col. 4, line 36.

In regard to claim 15, see col.3, lines 11+.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Abthoff et al (4377135).

Figure 3 shows a water spraying system including a nozzle 3 and is responsive to load (14) and rotational speed (15).

Claims 1 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Mesurier (1665885).

Figure 1 shows a water spraying system including a nozzle 11, a speed responsive delivery mechanism at 14, and a temperature control mechanism at 24.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3747

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Conner as applied to claim 1 above, and further in view of Iizuka et al (4165610).

Conner shows an engine in which all the cylinders are operated. Iizuka et al disclose variable displacement engine to improve fuel economy. It would have been obvious to one of ordinary skill in the art to modify the engine of Conner to include variable displacement operation; the result of which will control the number of nozzles and their point of injection.

Allowable Subject Matter

Claim 6 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
